Subject	Treatment of Logs with evident transmit errors		
Society	ZRS	Country:	Slovenia
Committee	C5	Paper Number	LA17_C5_38
Author	Robert Vilhar, S53WW		

With automatic adjudication of contest Logs various transmit errors can be detected. Most common set of such errors are wrongly set date and/or time and wrong declaration of the used call sign and/or UL. Contest robot algorithms can easily detect Logs with transmit errors. Today the rules are written in a way to give highest relevance/authority to the information provided in the LOG. For errors that are due to the mistakes in the transmit LOG either both stations (date/time) or only receiving station (call/UL) will be penalized. It is not fair to penalize receiving station for such an error.

**It is proposed to amend the second paragraph of the Chapter 5.3.11:**

The claimed contact shall be disqualified for any error in the information logged by the station. ***When there is high evidence that the error is due to the wrongly logged information of the transmitting station (i.e. wrong date/time or call/UL) such a Log shall not be used for adjudication purposes and should be moved into the check-log section.***
